

# Security Aptitude Assessment

## Understand Your Organization's Aptitude

Skill, knowledge, and responsibility gaps are a primary cause of miscommunication and security weaknesses within an organization's IT operations, security, and compliance areas. The governance around skill and knowledge gaps is essential to make an efficient decision to improve an organization's security posture, starting with increasing the staff's security capabilities to protect the organization's core business applications and data.

### What You Can Expect

The service will provide a report on the different skills, knowledge, and responsibility gaps of the representatives of the three lines of defense (operations, security, audit).

A survey covering knowledge, skill, responsibility, and behavioral traits for different security governance is conducted to carry out the initial analysis. In preparation, the advisor defines the assessment scope with the customer and coordinates the survey's execution in mutual communication with the customer.

After the assessment has been carried out, an interim report is evaluated in a workshop to determine the defined scope's applicability and identify possible mitigating or amplification factors. As a result of the workshop, the assessment of an additional survey or interviews can be carried out if necessary.

In a closing workshop, the final report, including executive summary and recommendations, shall be presented to the customer's stakeholders.

### Get in Touch

To improve your security defenses, you must first learn to see your risk and vulnerabilities through the lens of the SAP landscape. We can show you how to do that. Are you ready?
